POWDER TECHNOLOGY

Subject Index of Volume 86

Adsorption
application of breakthrough curves to investigate the chemisorption of carbon monoxide and hydrogen gases on platinum/silica catalysts, 239
Aerosols
the role of gas mixing in flame synthesis of titania powders, 87
Agglomerate chains
electrically stimulated agglomeration at an earthed surface, 119
Agglomerates
mechanical properties and attrition behaviour of $CaCO_3$ powders: influence of particle shape, 163
the surface topography of compacted agglomerates; a means to optimize compaction conditions, 201
Agglomeration
steam jet agglomeration of water soluble material, 49
a theory for agglomeration and sedimentation of ferromagnetic particles suspended in a hydrocarbon liquid and exposed to a magnetic field, 187
Ash
characterization of the filtration and regeneration behaviour of rigid ceramic barrier filters at high temperatures, 103
Atomization
production of fine powders by ultrasonic standing wave atomization, 77
Attrition
design of an attrition experiment to simulate the effects of crystal–wall or crystal–stirrer impacts occurring in a crystallizer, 155
Attrition propensity
mechanical properties and attrition behaviour of $CaCO_3$ powders: influence of particle shape, 163

Breakage
breakage of coals in ring-roller mills. Part I. The breakage properties of various coals and simulation model to predict steady-state mill performance, 275
Breakthrough measurements
application of breakthrough curves to investigate the chemisorption of carbon monoxide and hydrogen gases on platinum/silica catalysts, 239
Bubbling beds
fluidization regimes in non-slugging fluidized beds: the influence of pressure drop across the air distributor, 299
Buoyancy forces
effects of buoyancy forces on miscible liquid–liquid displacement processes in a porous medium, 265

Cake loading
dust cake detachment from gas filters, 21
Cakes
characterization of the filtration and regeneration behaviour of rigid ceramic barrier filters at high temperatures, 103

Capacitance
measurement of voidage in a fluidized bed using a capacitive sensor, 149
Carbon monoxide/hydrogen
application of breakthrough curves to investigate the chemisorption of carbon monoxide and hydrogen gases on platinum/silica catalysts, 239
Ceramics
the role of gas mixing in flame synthesis of titania powders, 87
characterization of the filtration and regeneration behaviour of rigid ceramic barrier filters at high temperatures, 103
Chain structure
study on magnetic fluidization of group C powders, 179
Circulating fluidized beds
a new method for local solid concentration measurement in circulating fluidized bed, 251
prediction of transition velocities and hydrodynamical regimes in fluidized beds, 285
fluidization regimes in non-slugging fluidized beds: the influence of pressure drop across the air distributor, 299
Coal
breakage of coals in ring-roller mills. Part I. The breakage properties of various coals and simulation model to predict steady-state mill performance, 275
Coal surface
components of the surface free energy of low rank coals in the presence of n-alkanes, 229
Coating efficiency
coating efficiency of seed particles in a fluidized bed by atomization of a powder suspension, 243
Collection efficiency
development of a cyclone separator with new design, 37
Combustion
the role of gas mixing in flame synthesis of titania powders, 87
Comminution
motion and stress intensity of grinding beads in a stirred media mill. Part 1: Energy density distribution and motion of single grinding beads, 59
motion and stress intensity of grinding beads in a stirred media mill. Part 2: Stress intensity and its effect on comminution, 69
Compaction
the surface topography of compacted agglomerates; a means to optimize compaction conditions, 201
Computer modelling
motion and stress intensity of grinding beads in a stirred media mill. Part 1: Energy density distribution and motion of single grinding beads, 59
Computer simulation
simulation of three-dimensional dust structures via particle trajectory calculations for cake-forming filtration, 113
Contact angle
components of the surface free energy of low rank coals in the presence of n-alkanes, 229

Elsevier Science S.A.

Contacting power law
prediction of Venturi scrubber grade efficiency curves using the contacting power law, 137
Crystallization
design of an attrition experiment to simulate the effects of crystal–wall or crystal–stirrer impacts occurring in a crystallizer, 155
Cyclone separator
development of a cyclone separator with new design, 37

Deglomeration
charge distribution and state of agglomeration after tribocharging fine particulate materials, 41
Density profiles
molecular dynamics modelling of granular chute flow: density and velocity profiles, 219
Detachment
dust cake detachment from gas filters, 21
Drying conditions
coating efficiency of seed particles in a fluidized bed by atomization of a powder suspension, 243
Dust
characterization of the filtration and regeneration behaviour of rigid ceramic barrier filters at high temperatures, 103
Dust cake
simulation of three-dimensional dust structures via particle trajectory calculations for cake-forming filtration, 113
Dust cakes
dust cake detachment from gas filters, 21
Dust separation
recent investigations with nozzle scrubbers, 31

Efficiency collection
prediction of Venturi scrubber grade efficiency curves using the contacting power law, 137
Electrically simulated agglomeration
electrically stimulated agglomeration at an earthed surface, 119
Electrochemical behaviour
the visualization of the electrochemical behaviour of metal particles in spouted, fluidized and packed beds, 145
Electrostatics
mass flux and effective migration velocity in electrostatic precipitators, 95
Electrostatic separation
charge distribution and state of agglomeration after tribocharging fine particulate materials, 41
Energy input
a study on grinding and energy input in stirred media mills, 171

Fast fluidization
prediction of transition velocities and hydrodynamical regimes in fluidized beds, 285
Ferromagnetic particles
a theory for agglomeration and sedimentation of ferromagnetic particles suspended in a hydrocarbon liquid and exposed to a magnetic field, 187
Fibres
low Reynolds number flow fields in imperfect fibre arrangements, 7
Filter material
dust cake detachment from gas filters, 21
Filtration
characterization of the filtration and regeneration behaviour of rigid ceramic barrier filters at high temperatures, 103
simulation of three-dimensional dust structures via particle trajectory calculations for cake-forming filtration, 113
Flow fields
low Reynolds number flow fields in imperfect fibre arrangements, 7
Fluctuations
fluidization regimes in non-slugging fluidized beds: the influence of pressure drop across the air distributor, 299
Fluid dynamics
motion and stress intensity of grinding beads in a stirred media mill. Part 1: Energy density distribution and motion of single grinding beads, 59
fluidization regimes in non-slugging fluidized beds: the influence of pressure drop across the air distributor, 299
Fluidization
study on magnetic fluidization of group C powders, 179
prediction of transition velocities and hydrodynamical regimes in fluidized beds, 285
Fluidization regimes
fluidization regimes in non-slugging fluidized beds: the influence of pressure drop across the air distributor, 299
Fluidized beds
the visualization of the electrochemical behaviour of metal particles in spouted, fluidized and packed beds, 145
measurement of voidage in a fluidized bed using a capacitive sensor, 149

Gas filters
dust cake detachment from gas filters, 21
Geldart's group C powder
study on magnetic fluidization of group C powders, 179
Granular chute flow
molecular dynamics modelling of granular chute flow: density and velocity profiles, 219
Grinding
motion and stress intensity of grinding beads in a stirred media mill. Part 1: Energy density distribution and motion of single grinding beads, 59
motion and stress intensity of grinding beads in a stirred media mill. Part 2: Stress intensity and its effect on comminution, 69
a study on grinding and energy input in stirred media mills, 171
breakage of coals in ring-roller mills. Part I. The breakage properties of various coals and simulation model to predict steady-state mill performance, 275
Ground product size
a study on grinding and energy input in stirred media mills, 171

Heat transfer
production of fine powders by ultrasonic standing wave atomization, 77
Heat transfer coefficients
a correction factor for one-dimensional heat transfer coefficients around a horizontal tube in a fluidized bed, 209
Hydrocarbon liquid
a theory for agglomeration and sedimentation of ferromagnetic particles suspended in a hydrocarbon liquid and exposed to a magnetic field, 187
Hydrodynamics
a new method for local solid concentration measurement in circulating fluidized bed, 251

Impact
design of an attrition experiment to simulate the effects of crystal–wall or crystal–stirrer impacts occurring in a crystallizer, 155
In-situ measurement
possibilities of near backward light scattering for characterizing dense particle systems, 127
Instantization
steam jet agglomeration of water soluble material, 49

Laser diffraction
the projected areas of ellipsoids and cylinders, 195

Light backscattering
possibilities of near backward light scattering for characterizing dense particle systems, 127

Magnetic field intensity
study on magnetic fluidization of group C powders, 179
Magnetization
a theory for agglomeration and sedimentation of ferromagnetic particles suspended in a hydrocarbon liquid and exposed to a magnetic field, 187
Mathematical model
breakage of coals in ring-roller mills. Part I. The breakage properties of various coals and simulation model to predict steady-state mill performance, 275
Mathematical modelling
measurement of voidage in a fluidized bed using a capacitive sensor, 149
Mechanical properties
mechanical properties and attrition behaviour of $CaCO_3$ powders: influence of particle shape, 163
Metal particles
the visualization of the electrochemical behaviour of metal particles in spouted, fluidized and packed beds, 145
Method of characteristics
wall pressure analysis of two-dimension shallow bins with top piles, 257
Method of wedges
wall pressure analysis of two-dimension shallow bins with top piles, 257
Mineral processing
motion and stress intensity of grinding beads in a stirred media mill. Part 2: Stress intensity and its effect on comminution, 69
Mixing
the role of gas mixing in flame synthesis of titania powders, 87
Models
low Reynolds number flow fields in imperfect fibre arrangements, 7
mass flux and effective migration velocity in electrostatic precipitators, 95
molecular dynamics modelling of granular chute flow: density and velocity profiles, 219
Molecular dynamics
molecular dynamics modelling of granular chute flow: density and velocity profiles, 219

n-Alkanes
components of the surface free energy of low rank coals in the presence of n-alkanes, 229
Nozzle scrubber
recent investigations with nozzle scrubbers, 31

One-dimensional heat transfer
a correction factor for one-dimensional heat transfer coefficients around a horizontal tube in a fluidized bed, 209

Packed beds
the visualization of the electrochemical behaviour of metal particles in spouted, fluidized and packed beds, 145
Particle attrition
development of a cyclone separator with new design, 37
Particle breakage
development of a cyclone separator with new design, 37
Particle charging
charge distribution and state of agglomeration after tribocharging fine particulate materials, 41
Particle comminution
development of a cyclone separator with new design, 37
Particle properties
mechanical properties and attrition behaviour of $CaCO_3$ powders: influence of particle shape, 163
Particle size
prediction of Venturi scrubber grade efficiency curves using the contacting power law, 137
Particle size analysis
possibilities of near backward light scattering for characterizing dense particle systems, 127
Particle sizing
the projected areas of ellipsoids and cylinders, 195
Particle trajectory
simulation of three-dimensional dust structures via particle trajectory calculations for cake-forming filtration, 113
Platinum/silica catalysts
application of breakthrough curves to investigate the chemisorption of carbon monoxide and hydrogen gases on platinum/silica catalysts, 239
Point-plate arrangement
electrically stimulated agglomeration at an earthed surface, 119
Porous media
effects of buoyancy forces on miscible liquid–liquid displacement processes in a porous medium, 265
Powder concentration
coating efficiency of seed particles in a fluidized bed by atomization of a powder suspension, 243
Precipitation
mass flux and effective migration velocity in electrostatic precipitators, 95
Pressure Distributions
the surface topography of compacted agglomerates; a means to optimize compaction conditions, 201
Probes
a new method for local solid concentration measurement in circulating fluidized bed, 251
Projected area
the projected areas of ellipsoids and cylinders, 195

Rheological properties
a study on grinding and energy input in stirred media mills, 171
Ring-roller mill
breakage of coals in ring-roller mills. Part I. The breakage properties of various coals and simulation model to predict steady-state mill performance, 275

Scale-up
breakage of coals in ring-roller mills. Part I. The breakage properties of various coals and simulation model to predict steady-state mill performance, 275
Sedimentation
a theory for agglomeration and sedimentation of ferromagnetic particles suspended in a hydrocarbon liquid and exposed to a magnetic field, 187
Seed particles
coating efficiency of seed particles in a fluidized bed by atomization of a powder suspension, 243
Shallow bins
wall pressure analysis of two-dimension shallow bins with top piles, 257
Simulation
design of an attrition experiment to simulate the effects of crystal–wall or crystal–stirrer impacts occurring in a crystallizer, 155
Size distribution
steam jet agglomeration of water soluble material, 49
production of fine powders by ultrasonic standing wave atomization, 77

Spheres
production of fine powders by ultrasonic standing wave atomization, 77
Spherical particles
possibilities of near backward light scattering for characterizing dense particle systems, 127
Spouted beds
the visualization of the electrochemical behaviour of metal particles in spouted, fluidized and packed beds, 145
Stirred media mills
a study on grinding and energy input in stirred media mills, 171
Stress intensity
motion and stress intensity of grinding beads in a stirred media mill. Part 2: Stress intensity and its effect on comminution, 69
Surface free energy
components of the surface free energy of low rank coals in the presence of n-alkanes, 229

Topography
the surface topography of compacted agglomerates; a means to optimize compaction conditions, 201
Transition velocities
prediction of transition velocities and hydrodynamical regimes in fluidized beds, 285
Transport
mass flux and effective migration velocity in electrostatic precipitators, 95
Turbulent fluidization
prediction of transition velocities and hydrodynamical regimes in fluidized beds, 285

Two-dimensional heat transfer
a correction factor for one-dimensional heat transfer coefficients around a horizontal tube in a fluidized bed, 209

Ultrasonic sound
production of fine powders by ultrasonic standing wave atomization, 77

Velocity profiles
molecular dynamics modelling of granular chute flow: density and velocity profiles, 219
Venturi scrubber
prediction of Venturi scrubber grade efficiency curves using the contacting power law, 137
Vertical displacement
effects of buoyancy forces on miscible liquid–liquid displacement processes in a porous medium, 265
Video taping
electrically stimulated agglomeration at an earthed surface, 119
Viscous fingering
effects of buoyancy forces on miscible liquid–liquid displacement processes in a porous medium, 265
Voidage
measurement of voidage in a fluidized bed using a capacitive sensor, 149

Wall pressure distribution
wall pressure analysis of two-dimension shallow bins with top piles, 257
Waste gas cleaning
recent investigations with nozzle scrubbers, 31
